

# class Pod::Render

Render POD documents to HTML, PDF or MD

## Table of Contents

- 1 [Synopsis](#)
- 2 [Methods](#)
- 2.1 [render](#)

## Synopsis

```
use Pod::Render;  
my Pod::Render $pr .= new;  
$pr.render( 'html', 'my-excellent-pod-document.pod6');
```

## Methods

### render

```
multi method render ( 'html', Str:D $pod-file, Str :$style )  
multi method render ( 'pdf', Str:D $pod-file, Str :$style )  
multi method render ( 'md', Str:D $pod-file )
```

Render the document given by [\\$pod-file](#) to one of the output formats html, pdf or markdown. To generate pdf the program [wkhtmltopdf](#) is used so that program must be installed. The style is one of the following styles; pod6, default, desert, doxy, sons-of-obsidian or sunburst.
