SCRIPT NAME

local_table.pql

DESCRIPTION

Demonstrates use of local tables. LOC_DESCRIPT is a local table. Each line in the 'init table' section contains an entry in this table. Each entry consist of table name key value field list values. The '%' character is used to denote a table name. The parameter contains the key value to look up.

1. PROCESS DETAILS

Input records are read from standard input. The input record contains **8** fields. Fields are delimited by the '|' character.

Output records are written to standard output. The output record contains **4** fields. Fields are delimited by the '|' character.

Input stream is **sorted** by the input field **LOCATION** (*string*).

Input records are **grouped** by the input field **LOCATION** (*string*).

1.1 LOCATION

Output Field

Description

Set to input field **LOCATION**

1.2 DESCRIPTION

Output Field

Description

Set to input field **LDESCRIPT**

Derived Input Field Evaluation

=> %LOC_DESCRIPT(LOCATION)

1.3 NUM_PRODUCTS

Output Field

Description

Distinct aggregation on input field **PRODUCT_CODE**.

1.4 AVG_COST_PRICE

Output Field

Description

Avg aggregation on input field **COST_PRICE**.

2. CONFIGURATION SETTINGS

2.1 *pequeldoc*

generate pod / pdf pequel script Reference Guide.: pdf

2.2 *detail*

Include Pequel Generated Program chapter in Pequeldoc: 1

2.3 *script_name*

script filename: local_table.pql

2.4 *header*

write header record to output.: 1

2.5 *optimize*

optimize generated code.: 1

2.6 *doc_title*

document title.: Local Table Example Script

2.7 *doc_email*

document email entry.: sample@youraddress.com

2.8 *doc_version*

document version for pequel script.: 2.2

3. TABLES

3.1 *LOC_DESCRIPT*

Table Type: *local*

Data

NSW — New South Wales

WA — Western Australia

SYD — Sydney

MEL — Melbourne

SA — South Australia

NT — Northern Territory

QLD — Queensland

VIC — Victoria

PER — Perth

ALIC — Alice Springs

4. TABLE INFORMATION SUMMARY

4.1 Table List Sorted By Table Name

LOC_DESCRIPT — 1 (*local*)
